

CME INFORMATION

Cardiovascular Innovations 2019 July 17-20, 2019 Denver, CO

Target Audience

Cardiovascular Innovations 2019 is designed to meet the needs of primary care providers, clinical cardiologists, interventional cardiologists, cardiovascular scientists, vascular surgeons, radiologists, and other health care providers and investigators who participate in the management of patients with coronary, peripheral and structural heart diseases.

Educational Goal

The purpose of the *Cardiovascular Innovations 2019* is to provide participants with an in-depth education and state-of-the-art management information on how to optimally evaluate and treat patients with coronary artery disease, peripheral vascular disease, and valvular, structural heart and arrhythmic heart diseases.

Learning Objectives

- Establish the diagnosis and select optimal treatment strategies for patients with both stable and unstable coronary artery disease
- Describe the guideline based indications and best-practice recommendations for the use of hemodynamic support devices, intravascular imaging techniques, and physiologic assessment of intravascular hemodynamic, structural heart devices, antiplatelet, lipid-lowering and antithrombotic drug interventions
- Recognize different manifestations of patient presentation with carotid disease, acute and chronic DVT, acute pulmonary embolism, chronic thromboembolic pulmonary hypertension (CTEPH), thoracic and abdominal aortic aneurysms, peripheral artery disease (PAD), critical limb ischemia, wound healing and identify high-risk subsets that would benefit from medical, surgical, or endovascular treatment
- Outline the risks and benefits of endovascular and surgical revascularization for patients with CLI
- List potential complications associated with endovascular treatment of carotid disease, acute and chronic DVT, pulmonary embolism, thoracic and abdominal aortic aneurysms, and CLI
- Define success when treating complex PAD
- Outline the components of a multidisciplinary team for structural, complex coronary, and CLI
- State the goals and identify the appropriate outcomes when treating end stage PAD and CLI patients

- Identify and treat patients with complex coronary artery, peripheral vascular, valve, or arrhythmic heart disease
- Define state-of-the-art management pearls to treat patients with hyperlipidemia, heart failure and structural heart disease
- Define guideline recommended therapies for coronary, structural, and endovascular disease.
- Define venous, arterial, pressure, and diabetes wounds and how to differentiate and treat these.
- Provide a comprehensive diagnostic assessment tool to treat coronary, structural, and arterial and venous disease.
- Discuss PTSD, venous insufficiency, and venous ulcers.
